

Crushing, Screening & Recycling Section

Rubble Master Opens North American Office

After 10 years of market development for Rubble Master in North America, the company has opened a sales and service facility in Michigan City, Ind.

Rubble Master Americas Corp. will serve the U.S. and Canadian markets plus several countries in the Caribbean, Central and South America. Services include supporting customers with their basic analyses and evaluation needs when starting up a recycling business, business planning, sales, rental, sales support, after sales and parts.

“Our goal in North America is to be the specialist and best supplier when it comes to resource recovery of concrete, asphalt, brick for small, medium and larger size companies around the construction industry,” said Alex Taubinger, managing director and vice president sales and marketing of Rubble Master Americas Corp.

“Construction companies, contractors, paving companies and trucking/hauling companies serving the construction industry as well as the demolition industry start to experience a lack of profit margins because of heavy competition, changing demands of developers and customers’ green building demands accelerating disposal fees and high prices for natural aggregate, plus expensive trucking. We would like to share our worldwide expertise of more than 20 years with businesses surrounding the construction industry,” Taubinger said.

“Recycling and the re-use of recycled construction aggregate [RCA] is just at the beginning stage in North America. We are not just talking about the huge saving potentials on projects for contractors, construction companies, customers, municipalities and cities,” Taubinger said.

Rubble Master has operated a parts hub in Memphis, Tenn., since 2009; its corporate office/headquarters is in Austria.

Anaconda Conveyors USA Introduces DF410 Portable Tracked Screener

The Anaconda DF410 screener is a compact screener.

Anaconda Conveyors USA’s DF410 is a portable, compact tracked screener.

“Our machine is designed with the entry level producer or recycler in mind. Our screening plant has a whole lot to offer customers that are looking to achieve large tonnages without paying a high price tag. The DF410 is ideal in compact urban spaces and will produce tonnages up to 300 ton per hour. This work horse that is priced like an entry level machine is suitable in many applications, including construction demolition, crushed rock, top soil compost, sand, gravel and coal,” according to Gordon Terry, general manager of Anaconda Conveyors USA.

The Anaconda DF410 tracked screener is available with the following options:

- Wheeled model
- Screen decks — mesh, bofor bar, finger
- Screens or punch plate

- Radio remote control
- Steel apron feeder

Gordon Terry, general manager of Anaconda Conveyors USA.

The Anaconda DF410 tracked screener is available with the following features and benefits:

- High energy 10 by 4 ft. (3 by 1.2 m) two bearing screen box (2 decks)
- Variable speed heavy duty belt feeder with impact bed
- Flip down hopper tailgate to allow direct feed from crusher belt
- JCB dieselmax 444, 84 hp (62.6 kW) engine
- Tail conveyor lowers hydraulically to allow easy access to bottom screen deck
- Hydraulic folding tail conveyor
- Fixed screen angle at 15 percent
- End tensioned mesh arrangement
- Easy access to all engine replacement parts
- Ten minute set up time
